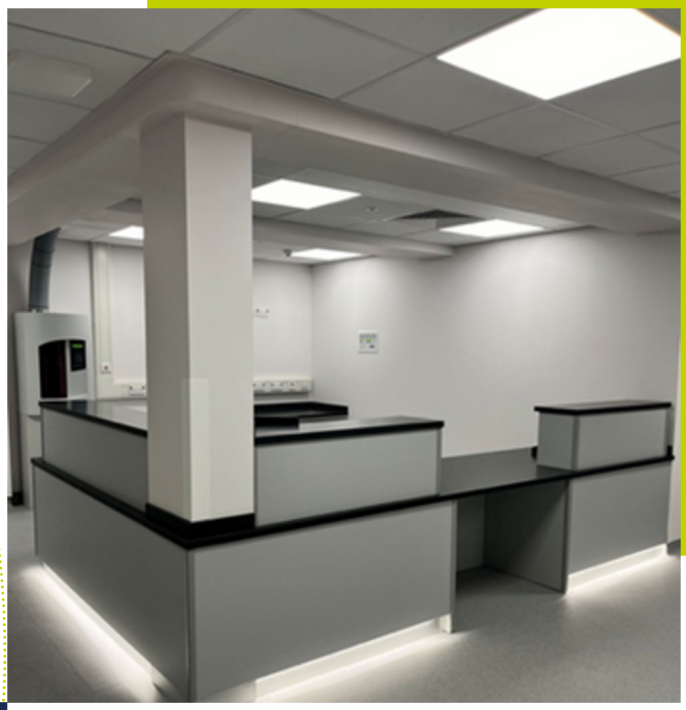
Quality in facilities management, estates and procurement

From legacy to leading-edge: Ward 11 transformed

A permanent home for Urology at Airedale



Airedale General Hospital, built over 50 years ago using RAAC, is writing a bold new chapter.

In response to the national RAAC safety challenge (2019), AGH Solutions Limited is proud to be leading critical remediation works that help to protect patients and keep services running smoothly, while the new hospital is being developed.

The latest milestone: Ward 11

The recent remediation and repurposing of Ward 11 at Airedale General Hospital marks a major milestone, not just in structural safety, but in enhancing specialist care delivery.

As the new, permanent home of the Urology Investigation Unit (UIU), the space now enables streamlined, patient-focused care under one roof.

Now structurally reinforced with precision-engineered end bearings and fail-safes, it has been fully repurposed into a state-of-the-art Urology Investigation Unit.

A powerful symbol of how heritage and innovation can coexist to deliver modern, safe care.

Centralised Urology services

All urology-related assessments and procedures can now be carried out within a single, purpose-built unit—reducing patient movement, improving continuity of care, and enhancing clinical efficiency.

Dedicated TWOC Clinic

The unit now includes a specialised space for Trial Without Catheter (TWOC) clinics—essential for assessing patients' ability to urinate independently after catheter removal. Having a dedicated TWOC area improves patient throughput and privacy.

TULA procedures on-site

The UIU now supports Transurethral Laser Ablation (TULA), a minimally invasive treatment for bladder tumors and other urological conditions. Previously carried out in theatre, this procedure can now be safely performed in-clinic, freeing up theatre space and reducing wait times.

These upgrades not only future-proof care delivery but also reflect AGH Solutions' commitment to turning infrastructure challenges into opportunities for innovation.

We'd like to say a huge thanks to our delivery partners **Hive Projects** and **Robertson Yorkshire & East Midlands** for bringing this transformation to life.

We'd also like to give a big shout-out to the dedicated **RAAC Team** at AGHS for steering this complex project to success!
